

Progression in calculation- Subtraction

Year Group objectives	Models and images to support teaching	Ways in which children could record
<p>Year 2</p> <p>Counting and understanding number</p> <p>Read and write two-digit and three-digit numbers in figures and words; describe and extend number sequences and recognise odd and even numbers</p> <p>Count up to 100 objects by grouping them and counting in tens, fives or twos; explain what each digit in a two-digit number represents, including numbers where 0 is a place holder; partition two-digit numbers in different ways, including into multiples of 10 and 1</p> <p>Order two-digit numbers and position them on a number line; use the greater than (>) and less than (<) signs</p> <p>Estimate a number of objects; round two-digit numbers to the nearest 10</p> <p>Knowing and using number facts</p> <p>Derive and recall all addition and subtraction facts for each number to at least 10, all pairs with totals to 20 and all pairs of multiples of 10 with totals up to 100</p> <p>Understand that halving is the inverse of doubling and derive and recall doubles of all numbers to 20, and the corresponding halves</p> <p>Use knowledge of number facts and operations to estimate and check answers to calculations</p> <p>Calculating</p> <p>Add or subtract mentally a one-digit number or a multiple of 10 to or from any two-digit number</p> <p>Use practical and informal written methods to add and subtract two-digit numbers</p> <p>Understand that subtraction is the inverse of addition and vice versa; use this to derive and record related addition and subtraction number sentences</p> <p>Use the symbols +, -, ×, ÷ and = to record and interpret number sentences involving all four operations; calculate the value of an unknown in a number sentence (e.g. □+2=6, 30-□=24)</p>	<p>Children need to look at the numbers in a subtraction calculation and decide if it is going to be easier and quicker to 'count on' to find the difference or 'count back' to take away.</p> <p>To make this decision children need to develop a 'feel' for the relative size of numbers.</p> <p>Most children are more successful when counting on, but when a 'small' number is subtracted from a 'big' number counting back can be the most efficient method.</p> <p>On a bead string/numberlines</p> <p>$23 - 18 = 5$ - counting on</p>  <p>Start with 18 beads. Count 2 to 20, count 3 to 23.</p> <p>$32 - 7 = 25$ - counting back</p>  <p>Start with 32 beads. Count back 2, count back 5.</p> <p>May use Dienes, Cuisenaire, Numicon</p> <p>To become effective calculators children need to be able to jump in 'chunks' rather than in ones, so it is vital that children learn to use facts such as $7 = 5 + 2$, when they are calculating with larger numbers.</p>  <p>Difference ITP</p> <p>Use the Counting On and Back ITP to support the imagery of counting on and back in ones and tens</p>	<p>Counting on $23 - 18$</p>  <p>Start on 18. Add 2 to 18, add 3 to 23. The difference between 18 and 23 is 5.</p> <p>On an empty number line $23 - 18 = 5$</p> <p>Start on 18, jump 2 to 20, jump 3 to 23, so 23 is 5 more than 18.</p>  <p>Counting back $32 - 7 = 25$</p>  <p>Start on 32. Take away 2, take away 5.</p> <p>It is important children use partitioning to subtract e.g. $7 - 2 = 5$</p> <p>On an empty number line $32 - 7 = 25$</p> <p>Start on 32, jump back 2 to 30, jump back 5 to 25.</p>  <div style="border: 1px solid black; padding: 5px;"> <p>Remember:</p> <ul style="list-style-type: none"> Children may not need to use a number line if they can do the calculation in their heads Children should be encouraged to use empty number lines to keep track of calculations they can't complete in their heads </div>

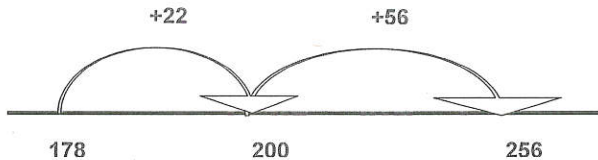

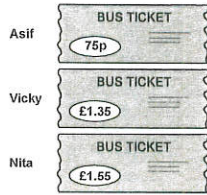

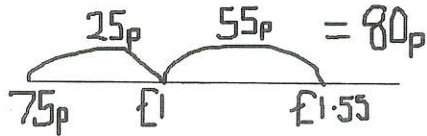

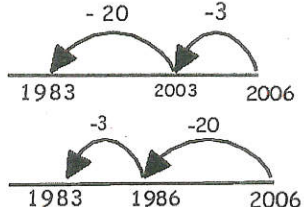

Progression in calculation- Subtraction

Year Group objectives	Models and Images to support teaching	Ways in which children could record
<p>Year 1</p> <p><i>Counting and understanding number</i></p> <p>Count reliably at least 20 objects, recognising that when rearranged the number of objects stays the same; estimate a number of objects that can be checked by counting</p> <p>Compare and order numbers, using the related vocabulary; use the equals (=) sign</p> <p>Read and write numerals from 0 to 20 then beyond; use knowledge of place value to position these numbers on a number track and number line</p> <p>Say the number that is 1 more or less than any given number, and 10 more or less for multiples of 10</p> <p><i>Knowing and using number facts</i></p> <p>Derive and recall all pairs of numbers with a total of 10 and addition facts for totals to at least 5; work out the corresponding subtraction facts - vital this is explored and explained at this stage of development</p> <p>Recall the doubles of all numbers to at least 10</p> <p><i>Calculating</i></p> <p>Relate addition to counting on; recognise that addition can be done in any order; use practical and informal written methods to support the addition of a one-digit number or a multiple of 10 to a one-digit or two-digit number</p> <p>Understand subtraction as 'take away' and find a 'difference' by counting up; use practical and informal written methods to support the subtraction of a one-digit number from a one-digit or two-digit number and a multiple of 10 from a two-digit number</p> <p>Use the vocabulary related to addition and subtraction and symbols to describe and record addition and subtraction number sentence</p>	<p>Children need to look at the numbers in a calculation and decide if it is going to be easier and quicker to 'count on' or 'count back'.</p> <p>To make this decision children need to develop a 'feel' for the relative size of numbers.</p> <p>Most children are more successful when counting on, but when a 'small' number is subtracted from a 'big' number counting back can be the most efficient method.</p> <p>On a bead string- show two so that children can see the 'difference'</p> <p>$12 - 9 = 3$ - counting on</p> <p>$12 - 3 = 9$ - counting back (taking away)</p> <p>Start with 12 beads Take away 2 Take away 1</p> <p>Also use Dienes, Cuisenaire, or other counting apparatus e.g. camels</p> <p>Number line in red and white to show the 10 barrier</p> <p>Use the Counting On and Back ITP to support the imagery of counting on and back in ones and tens</p> <p>Difference ITP</p>	<p>Counting on $12 - 9 = 3$</p> <p>with objects or a bead string</p> <p>On a marked number line $12 - 9 = 3$</p> <p>Start on 9. Add 1 to 10, add 2 to 12.</p> <p>On an empty number line $12 - 9 = 3$</p> <p>Take the 9 away using the scribbles on a number line to record and then count on to find the difference</p> <p>Numicon will really illustrate the concept of difference</p> <p>Counting back $12 - 3 = 9$</p> <p>On a marked number line $12 - 3 = 9$</p> <p>Start on 12. Count back 2 to 10, count back 1 to 9.</p> <p>On an empty number line $12 - 3 = 9$</p> <p>12 count back 3 is 9 (may jump in one's initially)</p>

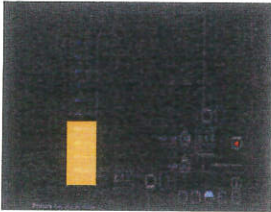

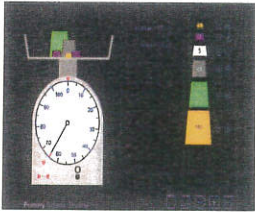

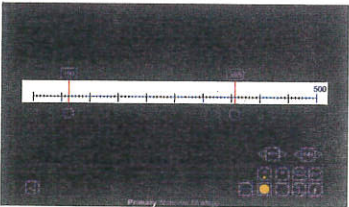

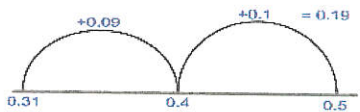

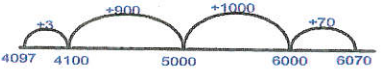

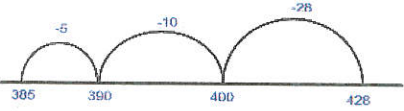

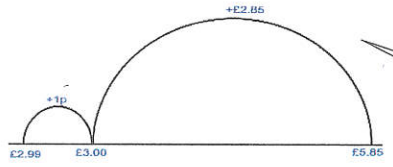

Progression in calculation- Subtraction

Year Group objectives	Models and images to support teaching	Ways in which children could record
<p>Year 3</p> <p><i>Counting and understanding number</i> Read, write and order whole numbers to at least 1000 and position them on a number line; count on from and back to zero in single-digit steps or multiples of 10</p> <p>Partition three-digit numbers into multiples of 100, 10 and 1 in different ways</p> <p>Round two-digit or three-digit numbers to the nearest 10 or 100 and give estimates for their sums and differences</p> <p>Knowing and using number facts</p> <p>Derive and recall all addition and subtraction facts for each number to 20, sums and differences of multiples of 10 and number pairs that total 100</p> <p>Use knowledge of number operations and corresponding inverses, including doubling and halving to estimate and check calculations</p> <p><i>Calculating</i></p> <p>Add or subtract mentally combinations of one-digit and two-digit numbers</p> <p>Develop and use written methods to record, support or explain addition and subtraction of two-digit and three-digit numbers</p>	<p>Children need to look at the numbers in a calculation and decide if it is going to be easier and quicker to 'count on' or 'count back'.</p> <p>To make this decision children need to develop a 'feel' for the relative size of numbers.</p> <p>Most children are more successful when counting on, but when a 'small' number is subtracted from a 'big' number counting back can be the most efficient method.</p> <p>ITP Counting on and back</p>  <p>To become effective calculators children need to be able to jump in big 'chunks' rather than in tens and ones, so it is vital that children learn to use facts such as : $76 + 4 = 80$, $80 + 20 = 100$, when they are calculating with larger numbers</p> <p>Model real life calculations in context. What is the difference in price?</p>  <p>$56p - 22p = 34p$</p>   <p>Difference ITP</p> <p>Use the Counting On and Back ITP to support the imagery of counting on and back in ones and tens</p>	<p>Counting on</p> <p>Sita had £10. She spent £2.35. How much money did she have left?</p>  <p>Counting back</p> <p>$105 - 12 = 93$</p>  <p>or</p>  <p>At this stage children are taking ownership and making their own choices, the number line records their mental method. This may involve compensation but not taught specifically</p> <p>178 - 49 = 128</p> 

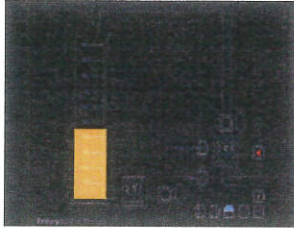

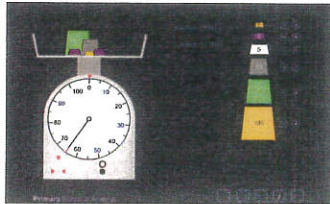

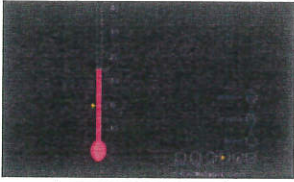

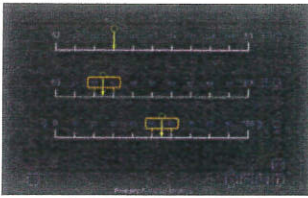

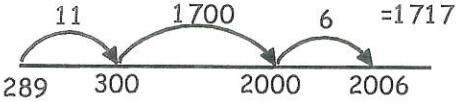

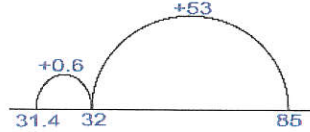

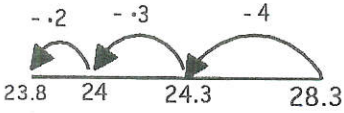

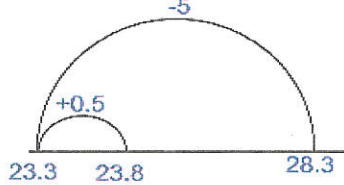

Progression in calculation- Subtraction

Year Group objectives	Models and images to support teaching	Ways in which children could record
<p>Year 4</p> <p><i>Counting and understanding number</i></p> <p>Recognise and continue number sequences formed by counting on or back in steps of constant size</p> <p>Partition, round and order four-digit whole numbers; use positive and negative numbers in context and position them on a number line; state inequalities using the symbols < and > (e.g. $-3 > -5$, $-1 < +1$)</p> <p>Use decimal notation for tenths and hundredths and partition decimals; relate the notation to money and measurement; position one-place and two-place decimals on a number line</p> <p><i>Knowing and using number facts</i></p> <p>Use knowledge of addition and subtraction facts and place value to derive sums and differences of pairs of multiples of 10, 100 or 1000</p> <p>Identify the doubles of two-digit numbers; use these to calculate doubles of multiples of 10 and 100 and derive the corresponding halves</p> <p>Use knowledge of rounding, number operations and inverses to estimate and check calculations</p> <p><i>Calculating</i></p> <p>Add or subtract mentally pairs of two-digit whole numbers (e.g. $47 + 58$, $91 - 35$)</p> <p>Refine and use efficient written methods to add and subtract two- and three-digit whole numbers and £, p</p> <p>Use a calculator to carry out one and two step calculations involving all 4 operations, recognise negative numbers on the display, correct mistaken entries and interpret display correctly in the context of money</p>	<p>Children need to look at the numbers in a calculation and decide if it is going to be easier and quicker to 'count on' or 'count back'.</p> <p>To make this decision children need to develop a 'feel' for the relative size of numbers.</p> <p>Most children are more successful when counting on, but when a 'small' number is subtracted from a 'big' number counting back can be the most efficient method.</p> <p>ITP Counting on and back - $75 + 25 = 100$, $100 - 25 = 75$</p>  <p>To become effective calculators children need to be able to jump in big 'chunks' rather than in tens and ones. It is vital that children learn to use facts such as: $75 + 25 = 100$, when they are calculating with larger numbers.</p> <p style="text-align: center;">$256 - 178 = 78$</p>  <p style="text-align: center;">Check by using inverse</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Support the continuing development of mental imagery by using a range of ITPs and Spreadsheets: Difference ITP, Sum, Product, Difference, Quotient, Addition and Subtraction Flash Cards Spreadsheets...</p> </div>	<p>Counting on</p> <p>Asif, Vicky and Nita go to town by bus. This is what they pay.</p>  <p>How much more does Nita pay than Asif?</p>  <p>Counting back - when subtracting a small amount only</p> <p>$2006 - 23 = 1983$</p>  <p>For 3 digit - 3 digit children can make choices on using a number line and when really secure use a column method</p> <div style="display: flex; align-items: center;"> <div style="margin-right: 20px;"> $\begin{array}{r} 576 \\ -249 \\ \hline 327 \end{array}$ </div> <div style="border: 1px solid black; border-radius: 15px; padding: 10px; width: fit-content;"> <p>Children could as easily do mentally or on a number line</p> </div> </div>

Progression in calculation- Subtraction

Year Group objectives	Models and images	Ways in which children may record
<p>Year 5</p> <p><i>Counting and understanding number</i></p> <p>Count from any given number in whole-number and decimal steps, extending beyond zero when counting backwards; relate the numbers to their position on a number line</p> <p>Explain what each digit represents in whole numbers and decimals with up to two places, and partition, round and order these numbers</p> <p><i>Knowing and using number facts</i></p> <p>Use knowledge of place value and addition and subtraction of two-digit numbers to derive sums and differences and doubles and halves of decimals (e.g. 6.5 ± 2.7, half of 5.6, double 0.34)</p> <p>Use knowledge of rounding, place value, number facts and inverse operations to estimate and check calculations</p> <p><i>Calculating</i></p> <p>Extend mental methods for whole number calculations, for example to subtract one near multiple of 1000 from another (eg. $6070-4097$)</p> <p>Use efficient written methods to add and subtract whole numbers and decimals with up to two places</p> <p>Use a calculator to solve problems including those involving decimals and interpret the display correctly in the context of measurement</p>	<p>Children need to look at the numbers in a calculation and decide if it is going to be easier and quicker to 'count on' or 'count back'. There should be opportunities to 'decide and choose', and discussion around reasons why.</p> <p>To make this decision children need to develop a 'feel' for the relative size of numbers. So in the calculation $5000-4999$ children can recognise what is efficient.</p> <p>Most children are more successful when counting on, but when a 'small' number is subtracted from a 'big' number counting back can be the most efficient method.</p> <p>Calculator skills must also be taught so this can be included in the 'decide and choose'</p> <p>To become effective calculators children need to be able to jump in big 'chunks' rather than in tens and ones. It is vital that children learn to use facts such as: $31 + 9 = 40$, so $0.31 + 0.09 = 0.4$, when they are calculating with larger numbers.</p> <div style="display: flex; justify-content: space-around; margin-top: 10px;"> <div style="text-align: center;">  <p>Measuring cylinder ITP</p> </div> <div style="text-align: center;">  <p>Scales ITP</p> </div> </div> <div style="text-align: center; margin-top: 20px;">  <p>Difference ITP</p> </div>	<p>Key message- number lines continue to be used, children are encouraged to make choices appropriate to the calculation- Numberline? Mental? Column? Calculator?</p> <p>Counting on</p> <p style="text-align: center;">$0.5 - 0.31 = 0.19$</p>  <p style="text-align: center;">$6070 - 4097 = 1063$</p>  <p>Counting back only when subtracting a small amount</p> <p style="text-align: center;">$428-43=385$</p>  <p>Using Known facts</p> <p>A shop sells three types of sunglasses.</p> <div style="display: flex; align-items: center; margin-left: 80px;">  </div> <p>What is the difference in price between the most expensive and least expensive sunglasses?</p>  <div style="border: 1px solid black; border-radius: 15px; padding: 5px; width: fit-content; margin-left: 100px;"> <p>Column method may also be used for decimal calculation</p> </div>

Progression in calculation- Subtraction

Year Group objectives	Models and images	Ways in which children could record
<p>Year 6</p> <p>Counting and understanding number</p> <p>Find the difference between a positive and a negative integer, or two negative integers, in context</p> <p>Use decimal notation for tenths, hundredths and thousandths; partition, round and order decimals with up to three places, and position them on the number line</p> <p>Calculating</p> <p>Calculate mentally with integers and decimals: $U \pm U$, I can add, subtract whole numbers and decimals in my head</p> <p>Use efficient written methods to add and subtract integers and decimals.</p> <p>Use a calculator to solve problems involving multi step calculations</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0; width: fit-content;"> <p style="font-size: small;">Work out the complement for each number before it appears on screen.</p> <p style="text-align: center;">£7.74 + = £10.00</p> <p style="font-size: x-small; text-align: center;">NEW NUMBER Change</p> </div> <div style="border: 1px solid black; padding: 5px; margin: 10px 0; width: fit-content;"> <p>Complements Spreadsheet on the 'complements to £10' tab.</p> </div>	<p>Children need to look at the numbers in a calculation and decide if it is going to be easier and quicker to 'count on' or 'count back'.</p> <p>To make this decision children need to develop a 'feel' for the relative size of numbers.</p> <p>Most children are more successful when counting on, but when a 'small' number is subtracted from a 'big' number counting back can be the most efficient method.</p> <p>To become effective calculators children need to be able to jump in big 'chunks' rather than in tens and ones. It is vital that children learn to use facts such as: $31 + 9 = 40$, so $0.31 + 0.09 = 0.4$, when they are calculating with larger numbers.</p> <div style="display: flex; justify-content: space-around; margin: 10px 0;"> <div style="text-align: center;">  <p>Measuring cylinder ITP</p> </div> <div style="text-align: center;">  <p>Scales ITP</p> </div> </div> <div style="display: flex; justify-content: space-around; margin: 10px 0;"> <div style="text-align: center;">  <p>Thermometer ITP</p> </div> <div style="text-align: center;">  <p>Decimal Number Line ITP</p> </div> </div> <div style="border: 1px solid black; padding: 5px; margin: 10px 0; width: fit-content;"> <p>Calculators should be used when the numbers are too large for mental and written methods. Children need to be able to estimate to know whether the calculator answer is reasonable</p> </div>	<p style="text-align: center; background-color: yellow;">Choose the appropriate method</p> <p>10 Calculate $2006 - 289 = 1717$</p> <div style="text-align: center; margin: 10px 0;">  </div> <div style="text-align: center; margin: 10px 0;"> <p style="background-color: yellow; padding: 2px;">$85 - 31.4 = 53.6$</p>  </div> <div style="text-align: center; margin: 10px 0;"> <p style="background-color: yellow; padding: 2px;">$28.3 - 4.5 = 23.8$</p>  <p>or see it as $28.3 - 5$ and then adjust</p> <div style="text-align: center; margin: 10px 0;">  </div> </div> <p style="text-align: center; background-color: yellow;">Children are making increasingly efficient and sophisticated choices for methods to use</p>
